# TEAM NOTICE #12/2017

---

## Vision

Regulation 2.17.1 describes forward and sideward vision requirements for solar car drivers. From the images and drawings we have seen, it appears that some teams may have difficulty meeting these requirements.

Drivers must be able to identify objects at every point that is:

- \* 4m from the driver's eyes, and
- \* between 0.4m below eye level and 0.7m above eye level, and
- \* between 100° left and 100° right of the direction of travel.

The attached diagram shows this range of points, relative to the driver's eyes. Compliance will be tested at scrutineering.
